## Run race 3d app download

(Pocket-fluff) - After its release on the iTunes App Store, Temple Run 2 had topped the charts within eight hours. Sales for Temple Run 2 have exploded, now reaching 20 million downloads in just four days. According to a press release from people at Imangi Studios: Temple Run 2 was downloaded over 20 million times in its four days of availability on the App Store. The game exploded to #1 Free App just eight hours after release, and is currently the #3 Top Grossing App. These numbers are certainly impressive, even with Android smartphone and tablet owners unable to access the hit game game yet, with the Android version of Temple Run 2 not being released at the same time as for iOS. Fortunately, they don't have to wait too long, and the boss of developer Imangi says it's finished and awaiting approval by Google, hopefully sometime this week. Temple Run 2 is built entirely in Unity, so it shouldn't have any of the cross-platform issues that players mourned about with the original. Imangi also detailed in its press release that iOS users have launched 210 million sessions of Temple Run 2, reaching an impressive 1.775 years of gameplay. The game is available on iTunes now as a free download, but as with the first game, there are plenty of in-app purchase options to buy coins and gems to improve the game in a more quick way. We expect the Android version to bring many more users.. Written by Jake Smith. The best free running apps do exactly what they say on the can: They're free and help you run. Nothing better, is it? With more people than ever running in lockdown - and the fact that a few of the most popular and previously free run apps now charge for some of their services, finding a free alternative is a great way to stay on track. According to one report, we're not only doing more running, we're also talking about driving more - in March, 34 million people discussed the sidewalk-pounding pastime on social media and 207k sharing running statistics from exercise apps - both figures that are more than January and February combined. National lockdown forced us from the gym to the garden, to the great outdoors, trying to find a way to stay active and fit - running, it seems, has taken the cake in terms of accessibility and scalability. Thanks, run! But do you know how to run, how can you keep it up? From motivational run-walk plans to route trackers, navigation aids and mile-loggers, we've rounded up the 8 best free running apps to help you hit your next PB - including the one that's had a 92% jump in downloads on 2019. Wowza. Ad - Continue Reading Under 1 Couch to 5K Everyone from your dentist to your aunt seems to have flirted with the idea of making Couch to 5k - the running plan that gets novice runners and never-run-before-runners able to run a full 5k. And according to the BBC, more than 858,000 downloaded app (backed by the NHS) between March and June. It's a whopping the year before! This app has five different trainers to motivate you on your journey - as well as tell you when to drive and when to go - including comedians Sarah Millican, radio presenter Jo Whiley and Olympian Michael Johnson. Woah. The program can be implemented for the 9 weeks or longer if you wish, and this app helps you continue when you stop seems like the easiest solution. There's a half-time bell when you're halfway there, so you know to turn around and complete the loop, a pre- and post-rating system to keep track of your motivation, as well as an easy-to-follow countdown clock so you always know how long is left of each race. IOS/ANDROID 2 Map My Run Map My Run, Under Armour's running app has a myriad of features that make your running experience smoother than ever. It connects to multiple wearables — including Apple Health, Apple Watch, Garmin, Fitbit, Jawbone, and more — which means you can take off with your fitness tracker, safe the knowledge your stats are still being logged on to. The app also offers real-time audio coaching on GPS-tracked runs, with atable voice for stats like pace, distance and elevation. IOS/ANDROID 3 Adidas Runtastic You might have Adidas running shoes, but have you ever tried their running app? Well, if you haven't so lace up because there are so many smart features you should take advantage of from distance, time, speed, height and calorie tracking to audio feedback, targeted challenges and customizable goals. Oh, and they'll even go one step further, tracking how many miles you've driven in your running shoes and letting you know when it's a good time to start thinking about investing in a new pair. They've literally thought of everything. Cheers, Adidas. IOS/ANDROID 4 Runkeeper Runkeeper by ASICS does a lot. It can track your races, set goals to run longer and faster, listen to audio stats telling you your pace, distance and time, follow a personal plan that keeps you better and participate in in-app virtual challenges. The best part? The app syncs with your wearables, so you can leave your phone at home and go out with your Apple Watch and still track your stats. IOS/ANDROID 5 Nike Run Club Nike Run Club describes this app as 'your perfect running partner' and TBH, we have to agree with them. Track and save races in their easy to navigate super-aesthetic app, make good use of GPS to keep you on the route, listen to audio coaching and set weekly, monthly or custom distance challenges as well as bespoke coaching plans to ensure you keep smashing your goals. While the trophies and badges you collect for new achievements can be virtual, they still mean the world to us. Go out there! IOS/ANDROID 6 Running Distance Tracker + Judged as the 'most accurate running app available' Running Distance Tracker+ tracks your pace, calories, heart rate and of course distance. Use the GPS to find new running routes, take a look your time and speed splits as well as and effort zones, and listen for customizable voice feedback so you know how you're doing. There are paid options in the app, but the basics - and they're really the only ones you need - are free. Which is the only thing that matters. IOS/ANDROID 7 Endomondo If you want to sync with other apps, set goals to smash, take on challenges and get social with your fellow running mates, Endomondo may be the app for you. With all the classics: run tracking, audio coaching, workout summaries, personal best announcements you can also add fun extras like documenting a particularly good (or hard) run with a picture, scroll through your friends' workouts and comment to keep them going! There is a premium option, but everything we have mentioned above is completely, completely free. Wins. IOS/ANDROID 8 Run Coach Run Coach does what it says on the can: It trains you through and between your runs to make you a better runner. Adjust your program as your fitness improves, adjust your schedule if you miss a race and need to recalibrate your program, access new steps and goals as your abilities increase, sync with your favorite laptops, and make good use of the on-hand trainers if you have questions about nutrition or injury. IOS/ANDROID This content is created and maintained by a third party, and imported to this page to help users provide their email addresses. You may find more information about this and similar content on piano.io 3D is not an easy creative discipline to learn. It's just the basics of creating great-looking 3D models can take a while to get to grips with, and that's before you get to the technical challenges such as lighting, rigging and rendering. Anyone with an eye on 3D will probably be horrified by the price tags attached to some of the best 3D modeling software. But if you want to learn but don't have the budget to match, there are plenty of free options. Here are nine of the best, starting with basic things for beginners and moving on to more advanced packages suitable for experienced 3D professionals.3D art: 28 amazing examples to inspire you01. SculptGLTeach yourself 3D sculpting in the browser (Image credit: Stéphane Ginier)For beginners who want to get a feel for sculpting in 3D, it's hard to go far wrong with Stéphane Ginier's Sculpt. It's a free digital sculpture app that runs in the browser - you can also get it as a Chrome app and standalone version - and it comes with plenty of features to get you started with 3D sculpting with a mouse or tablet. There are various brushes and manipulation tools to try, plus PBR vertex painting and alpha texture support, as well as multi-resolution sculpting, voxel remeshing and dynamic topology, and it will export your work as an OBJ, PLY or STL.02. Wings 3DWings 3D is an ideal first taste of 3D modeling (Image credit: 3D)If 3D modeling is something you want to try, Wings 3D is a great way to dip a toe in the water. It is a pure modeling modeling So you can build a basic 3D model out of polygons and then smooth it by splitting the mask. It's a pretty basic experience with a slightly unusual user interface that can be customized, but it's designed to be easy to use and supports light and materials as well as having a built-in AutoUV mapping facility.03. TinkercadAutodesk's Tinkercad helps you explore the basics of 3D (Image credit: Autodesk)Designed as an introduction to Autodesk's more heavyweight CAD tools, Tinkercad is a set of free online tools to get you started not only with 3D, but also with electronics and designing with code. Built with teachers, kids, hobbyists and designers in mind, it's all about placing, adjusting and combining objects to create design, and coming up with a whole stack of tutorials to get you started, and when you're done, you can export your work for 3D printing or export a disc like a SVG file for laser cutting.04. Daz StudioWith Daz Studio lets you create in 3D without all the modeling (Image credit: Daz 3D) 3D modeling is not for everyone, but even if you can't get your head around it, there are still some great opportunities to create 3D art without having to deal with polygons and subdivisions. Daz Studio doesn't have any modeling tools, but with it you can build complex 3D scenes and animation using a large library of finished people, animals, props, vehicles, accessories and environments. For beginners, there are plenty of interactive tutorials in the app to help you get to grips with features, so you can start learning about things like lighting, texturing, and rigging, and once you've completed your 3D masterpiece, you can do it at photorealistic quality so you can use it as you wish.05 Clara.ioClara.io's cloud-based system is easy to get started with (Image credit: Clara.io)A cloud-based 3D tool running in your web browser Clara.io gives you all the 3D modeling, animation, and rendering tools you

need to create and share 3D models and photorealistic renderings. It features a load of powerful modeling tools allowing you to do everything from tweaking an existing model through to building your own creation, and it uses V-Ray cloud rendering with a huge material library and flexible lighting setups. And even though it's web-based, Clara.ios is modeled on traditional desktop tools, making it easy to get started and get ready to adapt if you decide to move on to a more heavyweight app.06 SculpttrisSculptris serves as a great free introduction to ZBrush's tools (Image credit: Pixologic)Based on Pixologic's ZBrush, Sculpttris is the ideal free 3D modeling app to move on to once you've exhausted the options for SculptGL. Designed as an accessible, easy-to-use app for any type of artist it uses tessellation with automatic subdivision to enable you to get sculpting immediately, and has an intuitive, immersive interface with navigation control similar to those in ZBrush. If you want to go ahead with your work, it is easy to ZBrush for further refinement. Sculpttris is no longer in development, but it is still available as a free download.07. BlenderBlender may be free, but it's still one of the best 3D packages available (Image credit: Blender) The undisputed king of free 3D software, Blender is an immensely powerful tool for 3D creation that can handle just about anything much more expensive packages can do, from modeling and texturing through to rendering and kompation. There are also plenty of useful Blender tutorials out there to help you learn ropes. It's available to all major operating systems, and while it has traditionally had a bit of a reputation for being just a little too open source in its appearance, the latest update has seen it adopt more industry-standard interface. So now it has a right-click shortcut menu, as well as keyboard shortcuts that do exactly what you'd expect if you're used to other packages.08. BforartistsBforartists are basically Blender with a friendlier interface (Image credit: Bforartists)With Blender adopting a more standardized look, there is possibly less need for Bforartists, but it's definitely worth checking out if you're still not keen on Blender's user interface. It is a fork of Blender that is primarily aimed at artists and which has been created to be much easier to use, with a much improved and intuitive graphic UI. This should not come at the expense of functionality, though; the development team promises that all functions that work in Blender should also work in Bforartists.09. TerragenYou can't get much better than Terragen for creating incredible landscapes (Image credit: Planetside Software)When you think big about a 3D project, you need something that can create a suitably impressive world, and Terragen fits the bill in every respect. It is a powerful train for building AMD rendering realistic natural environments; if you can imagine a landscape, Terragen can do it. The free version is for personal use only (although you can use it commercially on a 30-day trial period) and comes with a few limitations compared to the full version, but it's an ideal way to explore Terragen's amazing world-creation tools.
